

We love wood as much as you do. That's why we completely rethought the way our Parky floors are made. A new product range goes beyond the boundaries of traditional wooden floors, laminate and vinyl flooring:

Real wood: each Parky floor is finished with a top layer of authentic real wood. The unique structures, rich colour variations and natural warmth can never be found in fake.

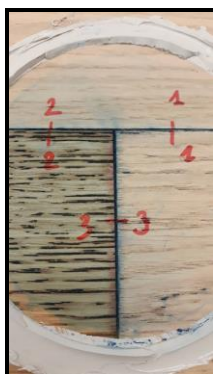

Sustainable: this real wood is precious and that is why we use it sparingly: we only use a **thin layer** of wood for the top finish, we source our trees from sustainable managed forests and every board is 100% **recyclable**, in contrast to the vinyl, SPC, WPC,... alternatives.

The **Titanium finish** has 8 solid layers of lacquer. This makes Parky even more resistant to scratches and ready for intensive use (**class 33**). Extremely strong and yet invisible, as the **super matt varnish** and **deeper brush technique** show off the wood even better.

Thanks to the new lacquer and the **Aqua Sealing Complete system**, moisture and bacteria no longer stand a chance. Every board's surface, including groove, is made **water-resistant** for 12 hours. This makes your floor bullet proof for daily spills and drops.

The following pictures clearly confirm this statement. A 12-hour water test on the old versus new Pro with 0.5mm mini bevels and on the new Summit collection with its 1.5mm maxi bevels shows how well the wood pores and bevels are protected:

Old versus new PRO (0.5mm bevels)

New SUMMIT collection (1,5mm bevels)
